DELIVERING ACCURATE PROVIDER DATA

CÚRATUS FORMERLY ANIMAS DATA SOLUTIONS JOINS FAHP AS A PREFERRED VENDOR

Cúratús which recently rebranded from Animas Data Solutions' is a full-service provider data management (PDM) SaaS technology company. The company's flagship PDM platform, ProviderLenzSM enables health plans to streamline provider data management processes. Improving and consolidating traditional PDM functions into a single platform, ProviderLenz helps health plans ensure the most accurate and up to date provider data while reducing costs.

In fact, ProviderLenz is a complete master data management (MDM) system that offers a full suite of provider data management tools in one place that ensures that health plans are fully compliant with the 'No Surprises Act' regulations that go into effect January 1, 2022, with each of the three critical components of the law built into the platform. Specifically, payers will be required to:

- Outreach to ALL providers to verify and update directory information at least quarterly,
- Update their directory within 2 days of receiving new information about a provider, and
- Create a procedure for removal of providers for which they are unable to verify information.

In addition, to addressing the 'No Surprises Act' challenges, provider data curation and enrichment, directory services, real time network adequacy, sanctions monitoring, accuracy scoring, and automated provider attestation and reporting services are some of the many other features built into the ProviderLenz platform.

Cúratús was founded by seasoned healthcare executives who have spent over a decade working at and for health plans tackling some of the industry's most challenging problems. Cúratús CEO, Mark Fabiano commented that, "We've seen firsthand the costs and challenges that inaccurate provider data causes payors and their members. We think we have built a solution that dramatically improves the accuracy of the data while also reducing plan spending and administrative burden by consolidating solutions into a single platform".
