

At Hazel Health, we believe in a whole child approach to healthcare

Pediatric physical and mental healthcare is available on-demand at school or at home. For health plans, Hazel meets pediatric members where they are and provides the highest quality care for K-12 students.

Hazel provides communities with an integrated approach to healthcare and solutions that address social determinants of health that impact many pediatric members. At school, increased access to high quality healthcare reduces school absences and improves student success in the classroom. At home, Hazel reduces transportation issues for families and days of missed work for parents.

Through connected, culturally-aware care, Hazel-employed providers help families more effectively engage in healthcare by reducing the cost of care, filling in access to care gaps, and connecting school-aged children back to their community based providers.
